Section 2.8: The Biconditional
Wednesday, September 25, 2019 11:16 AM
biconditional:
If you get $90^{\circ}$ or wisher in Math 155, then you will get an $A^{+}$and vice versa.
or
If and only if y as get $90 \%$ or higher in Math 155, then yo will get an $A^{+}$

What does it mean?
"if $p$, then $q$ and if $q$, then $p$
$o r$ "if $p$, then $q$ and if $\bar{\rho}$, then $\bar{q}$ "
or "either $\rho$ and $q$ are both true $q$ they are both false"
notation:

$$
\rho \leftrightarrow q
$$

"if and only if $p$, then $q$ " (iff $p$, then $q$ )
"If $\rho$, then $q$ and vile versa"
example: Consider the following canditicial statements. Do they still make sense when written as a biconditional?
(1) If you eat at Joe's, you will have a good meal.

No
(2) If two lies are perpendiculs, then they meet at a right angle.

Yes
(3) If today is February 14 th , then today is Valentine's Day. Yes
(4) If the car battery is drained, then the car will not stat. No
truth table:

| $p$ | $q$ | $p \leftrightarrow q$ |
| :---: | :---: | :---: |
| 0 | 0 | 1 |
| 0 | 1 | 0 |
| 1 | 0 | 0 |
| 1 | 1 | 1 |

example: Is the bicanditians $\quad \rho \leftrightarrow q$ logically equivalent to $(p \rightarrow q) \wedge(q \rightarrow p)$ ? Use a troth table to justify your answer.

| $p \quad q$ | $p \leftrightarrow q$ | $p \rightarrow q$ | $q \rightarrow p$ | $(p \rightarrow q) \wedge(q \rightarrow p)$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 1 | 1 | 1 | 1 |

| 1 |  | 1 |  | 1 |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 1 | 1 | 1 | 1 |
| 0 | 1 | 0 | 1 | 0 | 0 |
| 1 | 0 | 0 | 0 | 1 | 0 |
| 1 | 1 | 1 | 1 | 1 | 1 |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

example: The following statement is true:
If and only stacks are Boojums, then the Bellman is incorrect.
a) Snarks are Bodjums. Is the Bellman Correct? $p$ is true so $q$ is the
b) Snarks are not Boojms. Is the bellman correct? Yes $q$ is false
c) The bellman is carect. Are sacks Boojms? No
d) The bellman is incorrect. Are snarks Booms? Yes either $\rho$ and $a$ are both tire or they are both false
