

# Section 3.3: Geometric Sequences and Series

Monday, November 02, 2015  
11:05 AM

examples:

- ① 7, 14, 28, 56, ... 114688
- ② 100, 20, 4,  $\frac{4}{5}$ , ...
- ③  $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ,  $\frac{1}{16}$ , ...
- ④ 24, -16,  $\frac{32}{3}$ ,  $-\frac{64}{9}$ , ...

pattern?

mult by 2

mult by  $\frac{1}{5}$

mult by  $\frac{1}{2}$

mult by  $-\frac{2}{3}$

how do you find this?

take any term and divide by previous term

geometric sequence  $\equiv$  a sequence in which the next term is just the previous term multiplied by a constant

common ratio

recursive formula:

give a recursive formula for the sequence  
100, 20, 4,  $\frac{4}{5}$ , ...

geometric with  $r = \frac{1}{5}$

$$\begin{cases} a_1 = 100 \\ a_n = \frac{1}{5} a_{n-1} \end{cases}$$
