Tues Feb 23

Quiz 3 on

Fr., Feb 26

covering Chapter 5 on Exponents & Logs
(plus inverse functions)

→ if you need Newton's Law of Cooling,
I will give it to you

further rules:

$$\log_a a^x = x$$

and

$$a^{\log_a x} = x$$

⇔

$$\log_a a = 1$$

$$\log_a 1 = 0$$

↑
why?

$$a^{\log_a x} = y$$

$$\log_a x = \log_a y$$

$$x = y$$

examples : simplify

$$\log_a x^4 = 4$$

$$\log_x x^4 = 4$$

$$\log_a \sqrt[3]{a} = \frac{1}{3}$$

$$17^{\log_{17} y} = y$$

$$\ln e^x = x$$

$$\Rightarrow 17^{\log_{17} y} = x$$

$$\log_{17} y = \log_{17} x$$

$$y = x$$

Trickier:

$$8^{\log_8 3} = 3$$

$$8^{2 \log_8 3} = 8^{\log_8 3^2} = 3^2 \text{ or } 9$$

$$8^{\log_2 3} = (2^3)^{\log_2 3} = 2^{3 \log_2 3} = 2^{\log_2 3^3} = 3^3 = 27$$

$$8^{\log_8 2 + \log_8 3} = 8^{\log_8 6} = 6$$

118

$$\begin{aligned} 8^{\log_8 2 + \log_8 3} &= 8^{\log_8 2} \cdot 8^{\log_8 3} \\ &= 2 \cdot 3 \\ &= 6 \end{aligned}$$
