

Section 6.2: Applications of Right Triangles

Friday, January 09, 2015
2:13 PM

"solve a triangle" means to calculate all remaining angles and sides

what info do you need?

- for any old triangle, need 3 pieces of info, one of which must be a side (to set the scale)
- for a right triangle, since you already know one angle, need two other pieces of info, one of which must be a side
