

## Related Rates

1. Suppose the resistance of a certain resistor varies with temperature according to

$$R = 0.2 + \frac{T^2}{50}$$

where  $T$  is in  $^{\circ}\text{C}$  and  $R$  in  $\Omega$ . If the temperature is increasing at the constant rate of  $0.1^{\circ}\text{C/s}$ , how fast is the resistance changing when  $T = 100^{\circ}\text{C}$ ?

*Answer:*  $0.4\Omega/\text{s}$

2. Air is being pumped into a spherical balloon so that its volume increases at a rate of  $100\text{ cm}^3/\text{s}$ . How fast is the radius of the balloon increasing when the diameter of the balloon is  $20\text{ cm}$ ?

*Answer:*  $0.08\text{ cm/s}$

3. A ladder  $5$  meters long is leaning against a vertical wall. If the bottom of the ladder is pulled away at the constant rate of  $2\text{ m/s}$ , how fast is the top of the ladder moving down the wall when the bottom is  $3$  meters from the wall?

*Answer:*  $1.5\text{ m/s}$

4. A water tank has the shape of an inverted circular cone with a top radius of  $2\text{ m}$  and a height of  $6\text{ m}$ . If water is being pumped into the tank at a rate of  $4\text{ m}^3/\text{min}$ , find the rate at which the water level is rising when the water is  $4\text{ m}$  deep. *Hint:*  $V = \frac{1}{3}\pi r^2 h$ .

*Answer:*  $0.72\text{ m/min}$

5. A rock is thrown into a small pond and causes a circular ripple. If the radius of the circle is increasing at  $1.5\text{ m/s}$ , how fast is the area changing when the diameter is  $4$  meters?

*Answer:*  $18.85\text{ m}^2/\text{s}$

6. A person two meters tall approaches a street light that is  $5$  meters above the ground at the speed of  $1.5\text{ m/s}$ . How fast is the end of the person's shadow moving?

*Answer:*  $2.5\text{ m/s}$

7. The tuning frequency  $f$  of an electronic tuner is inversely proportional to the square root of the capacitance  $C$  in the circuit. If  $f = 920\text{ kHz}$  for  $C = 3.5\text{ pF}$ , find how fast  $f$  is changing at this frequency if  $dC/dt = 0.3\text{ pF/s}$ .

*Answer:*  $-39.43\text{ kHz/s}$

8. A child is flying a kite on a windy day. Assume that the kite maintains a constant height of  $40$  meters above the ground. At what rate is the string being let out when  $50$  meters of string is already out and the horizontal speed of the kite is  $2\text{ m/s}$ ?

*Answer:*  $1.2\text{ m/s}$

9. Assume that the population of wolves  $W$  and bears  $B$  in a certain forest satisfy the equation

$$W^2 + B^3 = \text{constant.}$$

At some time, there are  $15$  bears and  $100$  wolves in the forest and the bear population is increasing at a rate of  $1$  bear/year. Determine the rate of change of the wolf population?

*Answer:*  $-3.38$  wolves/year.

10. A variable resistor  $R$  and a  $6\Omega$  resistor in parallel have a combined resistance  $R_T$  given by

$$R_T = \frac{6R}{R+6}.$$

If  $R$  is changing at a rate of  $0.2\Omega/\text{min}$  when  $R = 4.0\Omega$ , find the rate at which  $R_T$  is changing.

*Answer:*  $0.07\Omega/\text{min}$
